Hi Trisha,

I hope you're doing well!

I am resending this email as I did not CC the course instructor.

Attached is a word document containing the final version of my metadata findings for documents hosted at <https://ushe.edu/wp-content/uploads/>. It includes an executive summary, detailed findings, mitigation suggestions, and an appendix of all referenced URLs. I also included the raw text files of the metadata information, and the scripts (tools) used to parse through the data (might be useful for the website engineers).

If you have a moment, I'd really appreciate it if you could share any feedback. Your response is important for my course assignment and will help demonstrate that the report was useful from a practical standpoint.

Please feel free to stay in touch with me if you need any insight on how to apply the mitigations I mention in the report, I'd be happy to help. I also came across several interesting findings during the analysis that I believe are worth looking into which are included in the report.

And again, thank you so much for your participation and support!

Best,

Naor Golan

Hi Naor,

Thanks so much for your great work. You've been able to analyze and point out a great deal of our Frankenstein website's vulnerabilities. Our team inherited the website some years back and we've had to learn as we go. These insights will help us implement some fixes and future policies from our side, and I'm planning on forwarding these findings to a web developer we often work with for some of the mitigations you mentioned as well. Number one on my list is to clear our website of the easily accessible emails and implementing a future upload policy to remove metadata.

Thanks again for all of your insights and help. You've been very pleasant to work with along the way.

Trisha Dugovic

No problem at all, I'm really glad I could help! If any questions come up down the line or if you need anything else, feel free to reach out anytime.

Wishing you a great week ahead!

Best,
Naor
