Please have no worries. No legal action will be taken. Honestly, it is not surprising that an easy bypass to the license check exists. We never fortified that, partly in recognition of the futility.

I look forward to hearing more!

Thank you,

-

Hello Jeremy,

Apologies for the delay, I've been dealing with finals at my university.

The vulnerability appears to stem from how the software validates registry key values related to licensing. By modifying or recreating specific entries, it is possible to bypass validation and enable paid/pro features without proper authorization. I have clear reproduction steps, proof-of-concept, and can suggest mitigations if helpful.

Please let me know how you'd like me to share the full details.

I would also be open to continuing this conversation non-anonymously via my university email for easier coordination. Before doing so, I'd appreciate confirmation that this will be treated as a good-

faith security report and that no legal action will be pursued regarding this disclosure.

My goal is simply to help improve the security of your product, and I'm happy to coordinate responsibly.

Thank you for your time,
[REDACTED]

Dear bitsum,

I hope you are doing well. I wanted to reach out because I recently identified a vulnerability in one of your programs. I have been a big fan of your products for quite some time, which is why I felt it was important to contact you directly and responsibly disclose the issue.

The vulnerability appears to allow users to gain access to professional/paid versions without proper authorization. I would be happy to provide additional details, reproduction steps, and any information needed to help your team investigate and resolve the matter securely.

I also want to apologize for sending this email anonymously. My professor advised me that doing so would be the best initial approach when reporting a security issue. Additionally, my professor has expressed strong interest in this matter and would be happy to be involved or copied on future correspondence if helpful.

I am a graduating student hoping to apply my knowledge and skills in ways that can genuinely help organizations improve their security. I would sincerely appreciate any opportunity for professional recognition that I could include on my resume or professional job profiles, as finding a position in my field has been extremely challenging.

I appreciate your time and consideration, and I look forward to hopefully working with you.

Sincerely,

This email is a service from Bitsum LLC. Delivered by Zendesk
